ASSIGNMENT 3

1. (a) Inspect --> Networks (1st Request)--> Header --> Check for request method for either get or post.

(b) The type of search requests eBay is using is GET

(c) The URL variable represents the search term is _nkw (new key word)

(d) After clicking on the "Auction" the URL variable which represents the auction searches is when we see that every URL consists of a key value pair where every key is separated by '&' thus when checked for auction the key is LH_Auction and the value is 1

(e) The shorter URL that produces the same search result page is https://www.ebay.com/sch/i.html?_nkw=LG+phone&LH_Auction=1

(f) The variable in the URL identifies the page number is _pgn=2

(g) The feature common to each item in the search results page<ul class="srp-results srp-list clearfix">.

(h) On identifying the number of bids for each item in search results all the span will have class id in common. I.e. 1 bid
